

category	description	called	symbol	natural	coherent	base	derived	core	geometrical	remarks
base units that are natural units	plane angle	rad is called 'radian'	rad	○	○	○			○	
		rad ² is called 'steradian'	rad ²	○	○		○		○	
	logarithm of Napier's constant (Greek nymph Nephelē)	'nephe'	nephe	○	○	○				
	reciprocal Avogadro constant (N_A^{-1})	substance name (ex. Carbon dioxide)	substance symbol (ex. CO ₂)	○	○	○				The SI noted "when the mole is used, the elementary entities must be specified and may be atoms, molecules, ions, electrons, other particles, or specified groups of such particles." In this context 's' is equivalent to '3-' and 'mol is called 'natural mol.'
	natural unit of impedance	'homega'	Ω or Z _r	○	○	○				
base units that are not natural units	harmonic meter	'harmon'	h		○	○		○	○	If a unit is omitted after square or cube, the unit shall be deemed to as harmon.(ex. 'square' expresses 'square harmon'(q, 'q' comes from Latin 'quadrata'), and 'cube' expresses 'cubic harmon'(c, 'c' comes from Latin 'cubus'). A square sub harmon(=10 ⁻⁴ h ²) is symbolized as h ² and a sub square (=10 ⁻⁴ h ²) is symbolized as q. A cubic sub harmon (=10 ⁻⁴ h ³) is symbolized as h ³ and a sub cube (=10 ⁻⁴ h ³) is symbolized as c. 1,c=0.97424 cc.
	harmonic second	'hic'	h ² or q h ³ or c		○		○		○	
	harmonic Joule (Roman goddess Juno)	'Juno'	h ² or c		○		○		○	
	harmonic Kelvin (Greek muse Kalliope, =10 ⁻⁴ H)	'Kalliope'	J K		○	○				The overline is added when the unit is used for equivalent dose. (ex. effective Juno/looloh(±J±I))
	harmonic gram	'looloh'	J K		○		○	○		
derived units of dynamical quantities	harmonic Watt (Norse figure Walküre)	'Walku'	W		○		○	○		The overline is added when the unit is used for luminous flux. (ex. effective Walku(±W))
	harmonic Newton (Greek muse Nete)	'Nete'	N		○		○			
	harmonic Pascal (Greek muse Polymnia)	'Polym'	P		○		○			The overline is added when the unit is used for phone pressure. (ex. effective Polym(±P))
	harmonic Coulomb (Greek muse Clio)	'Clio'	C		○		○			The prefix 'harmonic(±)' should be called 'universal' if the universal unit is equal to the harmonic unit.
derived units of electro-magnetic quantities	harmonic Ampere (Greek muse Aoide)	'Aoide'	A		○		○			If the context tells you it is a Harmonic System unit, you do not need to pronounce '±'. The unit of voltage is "Ω, A," but if you first read "Ω" as "nohm," you will know that the next unit is not an SI unit but a harmonic system unit so that you can read it as "nohm Ampere" instead of "nohm harmonic Ampere." Similarly, the unit of magnetomotive force, "Ω ₂ · A," can be read as "turn Ampere" instead of "turn harmonic Ampere."
	harmonic Ørsted (Greek muse Erato)	'Erato'	E		○		○			If the context tells you it is a Harmonic System unit, you do not need to pronounce '±'. The unit of magnetic flux density is "Ω ₂ E," but if you first read "Ω ₂ " as "nohm," you will know that the next unit is not an SI unit but a harmonic system unit so that you can read it as "nohm Ørsted" instead of "nohm harmonic Ørsted." Similarly, the unit of electric flux density, "Ω ₂ · E," can be read as "turn Ørsted" instead of "turn harmonic Ørsted."
	harmonic Tesla (Greek muse Thalia)	'Thalia'	T		○		○			
	the Rydberg constant	'Rydberg'	R _∞	○						
defining constants	the speed of light in vacuum	'light'	c or c ₀	○						
	the quantum of action	'quantum'	h	○						
	the Boltzmann constant	'Bolt'	k _B	○						
	total solid angle of a hypersphere	Ω ₁ is called 'cycle' Ω ₂ is called 'turn'	Ω ₁ Ω ₂	○ ○					○ ○	
non-coherent supplementary constants	logarithm of an integer	Ω ₁ is called 'bit' Ω ₂ is called 'figure' (z = log(2)/log2) Ω ₃ is called 'bubble' Ω ₄ is called 'byte'	U _k (k=1,2,3,4,8,...)	○ ○ ○ ○						In environments where "U" cannot be used, "T" is used as an alias.
	harmonic mol	'harmonic mole' with substance name (ex. harmonic mole Carbon dioxide)	mol substance symbol (ex. molCO ₂)							The prefix 'harmonic(±)' can be called 'universal' because the universal unit is equal to the harmonic unit.
	elementary electric charge	'electron'	e	○						
	minor prefixes	10 ⁻⁴ 10 ⁻³	sub' atomic'							The prefix 'harmonic(±)' is omitted if the expression includes the prefix 'sub'. The prefix 'harmonic(±)' is omitted if the expression includes the prefix 'atomic'.
	major prefixes	10 ¹ (Roman goddess Diana) 10 ² 10 ³	diana' hyper' cosmic'							'diana' is used only when expressing the unit of the Gravitic System with the Harmonic System. The prefix 'harmonic(±)' is omitted if the expression includes the prefix 'hyper'. The prefix 'harmonic(±)' is omitted if the expression includes the prefix 'cosmic'.
power prefixes	2nd power	'di-'	2							
	3rd power	'ter-'	3							
	4th power	'tetra-'	4							
	5th power	'penta-'	5							
	6th power	'hexa-'	6							
	7th power	'hepta-'	7							
non-coherent Earth local unit and supplementary constants	the meridian length of the Earth	'Earth meridian' or simply 'meridian'	m _E						○	the Earth local extension
	the rotation period of the Earth (at the beginning of year 1900.)	'Earth solar' or simply 'solar'	s _E							
	the gravitational acceleration of the Earth	'gce of Earth' or simply 'gce'	g _E							
	difference of thermodynamic temperature and the base point (0 ^o °H is correspondent to 118,2354 _± K)	'degree H'	°H					○		
non-coherent Earth local calendar time	365.31/128 days	'year'	☼						○	
	10 ⁻¹ year	'month'	☾						○	
	1 Ω ₁	'day'	☼	○					○	
	10 ⁻¹ day	'unitia'	☾						○	
	10 ⁻² day	'ditia'	☾						○	
	10 ⁻³ day	'tertia'	☾						○	
	2 ⁻⁷ (1/128) day	'nodus'	☼						○	
	2 ⁻⁸ years	'hexon'	☼						○	
	10 ⁻³ nodus	'termon'	☾						○	
Social aliases (not part of the Universal Unit System)	100 times least valued currency unit	'mon' with country name	mon country name							Least valued currency unit for each country(or economic group) Its value is distinguished by attaching the country code after 'mon'. (ex. 1\$ = 84; mon _{us})
	10 ⁻¹ harmon	'unimol'	u ₁ h						○	1 unimol = 2.2696 centimeter = 0.89354 inch. (The optional diacritical mark "˘" indicates the stress in a word.)
	10 ⁻² looloh	'dinol'	u ₂ h							1 dinol = 0.91548 gram = 0.03229 ounce. (The optional diacritical mark "˘" indicates the stress in a word.)
	10 ⁻³ c _E	'atol'	γ						○	1 atol = 1 harmon / nic = 2.509 997 km/hour, 10; atol = 30.120 00 km/hour
